

# TRAPPER and TRADER

## TWO STEM-RUST RESISTANT VARIETIES WITH SUPERIOR TEST WEIGHT

Trader and Trapper are sister selections from a cross of Warrior with Selkirk-Cheyenne. The varieties combine productiveness with stem rust resistance and good quality. Both offer superior test weight and excellent quality, with good mixing tolerance and good loaf volume potential.

Trader and Trapper were released by the Nebraska Agricultural Experiment Station in cooperation with the Colorado Experiment Station and the USDA.

### DESCRIPTION

Trader and Trapper are excellent in straw strength. They are slightly later in maturity and slightly taller than Warrior. Heads are medium long, medium in density, erect, with smooth white glumes. Kernels are hard, red

## YIELD DATA

	1965-67 No. Platte	1966-67 Alliance	1967 Outstate-Tests W, SW, C
Warrior	45.1	48.9	41.2
Trader	52.2	49.7	42.3
Trapper	52.8	46.9	42.8
Lancer	49.5	48.4	44.0

and medium in length. They are larger, less angular and more plump than Warrior. The brush is small and short.

Both varieties show excellent resistance to prevalent races of stem rust, but are susceptible to leaf rust, bunt, wheat streak and soil borne mosaic.

### ADAPTATION

Trader and Trapper are excellent in winter-hardiness; however, Trapper shows some superiority in this characteristic. Both varieties are adapted to west, southwest and north central cropping districts, and to the western countries of the central cropping district. Trapper should be used in more northern areas because of its superior winter-hardiness.

## VARIETY COMPARISON

Variety	Maturity	Winter Hardi- ness	Straw Strength	Yield	Test Weight	Milling baking quality	Resistance	
							Stem Rust	Leaf Rust
Trader	Medium	Good	Strong	Ex.	Good	Ex.	R	S
Trapper	Medium	V.Good	Strong	Ex.	Good	Ex.	R	S
Lancer	M.Early	Good	Strong	Ex.	Good	Ex.	R	S
Warrior	M.Early	V.Good	Strong	Ex.	Fair	Ex.	S	S
Scout	Early	Fair	Medium	Ex.	Good	Ex.	MR	S

# TRAPPER and TRADER

## Certified Varieties for Nebraska Growers

**SCOUT 66** - Similar to Scout, but more uniform in height, maturity and milling and baking qualities.

**GUIDE** - A special purpose variety selected on the basis of winter hardiness and stem rust resistance.

**SCOUT** - Early maturing variety with good resistance to stem rust. Consistent high yielding ability with good test weight.

**LANCER** - Moderately early with moderately short, stiff straw. Good yieldability, excellent quality, stem rust resistant.

**GAGE** - A moderately early variety with short, stiff straw. Combines an excellent yield record with resistance to leaf and stem rust.

**WARRIOR** - Mid-season, moderately short variety with excellent straw strength. Good winter hardiness and quality.

**OMAHA** - Early maturing variety with good winter hardiness. Good test weight, good milling and baking qualities.

**OTTAWA** - Moderately short, early maturing variety with resistance to soil borne mosaic. Moderate winter hardiness.
