

BONUS WHEAT**Exhibit D. Additional description of the variety.**

Bonus wheat is a two gene dwarf, about 34" in height, and is a hard red spring type. It has an erect juvenile growth and at boot stage the flag leaf is erect and twisted. The leaves have a waxy bloom. The auricles are purple and glabrous, while the rachis internodes are pubescent. The spike is short and narrow and possesses short awns. The seed is similar to Yecora Rojo in both size and shape.

It has been noted during multiplication that taller variants, both earlier and later do exist in this variety at a frequency less than 0.5%.
