# Definition of Terms

**Straw strength = The likelihood for a variety to lodge  
(linked with stature)**

**Maturity = The time in the late summer in which the wheat  
variety is ready to harvest**

## OR, ID & WA Preferred Wheat Varieties Quality Ratings

**Most Desirable (MD)—These varieties generally have high test weights, appropriate protein content (kernel properties), and excellent milling and end-use properties.**

**Desirable (D)—The kernel, milling, and end-use qualities of these varieties range from good to very good. The quality attributes of these varieties are desirable in international trade.**

**Acceptable (A)—The kernel, milling and end-use qualities of these varieties range from acceptable to good. Individual varieties may possess minor flaws. The quality attributes of these varieties are acceptable in international trade.**

**Least Desirable (LD)—One or more critical flaws in quality are present in these varieties. The intrinsic quality of PNW wheat will be improved if these varieties are not planted**
