MJ-4 is a semidwarf, stiff straw soft white winter wheat originating from a 1987 cross of Madsen and a selection of mine called W-11.

MJ-4 is adapted to the soft white winter wheat growing areas of the Pacific Northwest with a least 14" of precipitation.

MJ-4 has excellent resistance to stripe rust, leaf rust and stem rust. Plant height is similar to Madsen. MJ-4 contains a height variant in a less than 1% frequency that can be up to 10" taller.

MJ-4 is a awncd, semidwarf with white glumes and white straw.

Thank you
