

Exp. # 07651-10:0006

Hard Red Spring Wheat

07651-10:0006 is a common hard red spring wheat adapted to the Pacific Northwest. 07651-10:0006 was developed by WestBred, from the cross "Espresso/Avocete". Espresso contributes winter hardiness which allows 07651-10:0006 to be planted as a fall planted spring wheat.

07651-10:0006 is a semi-dwarf hard red spring wheat. The head is strap shaped, middense, awned and inclined at maturity. The auricles are absent of anthocyanin but hair is present. The chaff color is white at maturity and the stem is hollow. The glume shoulders are oblique with an acuminate beak. The seed is hard, red, and oval with angular cheeks. The brush is short with no collar.

A variant that is similar to 07651-10:0006, but is 10-15 cm taller, may occur at a frequency of up to .15% (15 per 10,000 seeds). A white seeded variant may occur at a frequency of up to .2% (20 per 10,000 seeds). Otherwise no other variants are known to occur. Application for Plant Variety Protections will be made and the Title V option will be taken.
